

What is UHC?

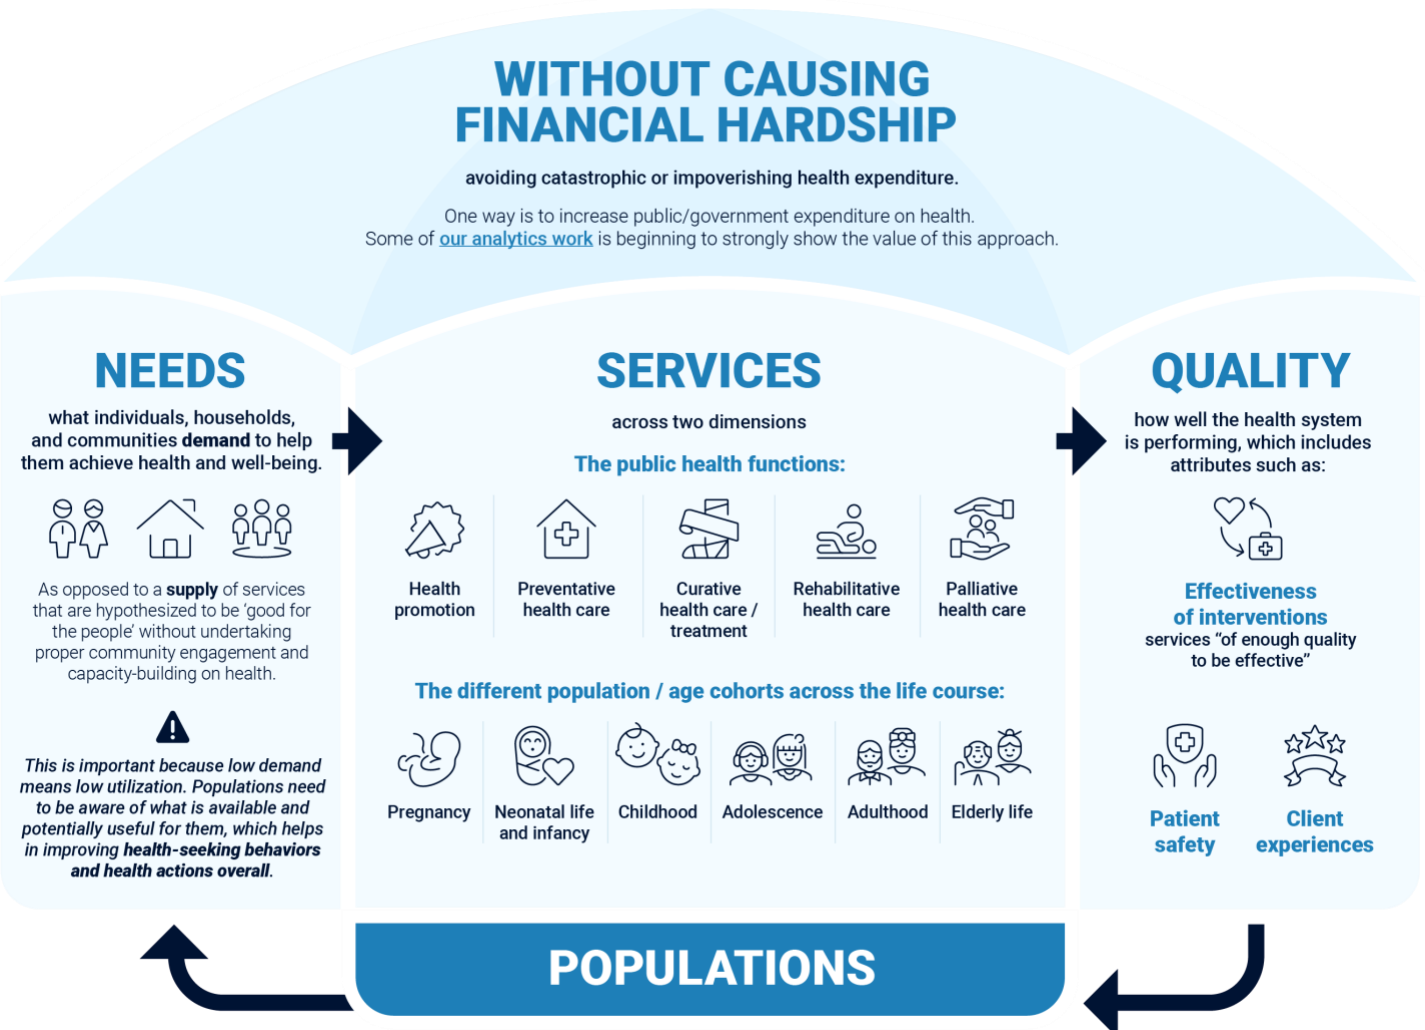

“I receive quality care when I need it, without suffering financial hardship.”

Rather than *complicated*, Universal Health Coverage (UHC) is *complex* – involving many working pieces. The concept is also adaptive and responsive to the [investments](#) and influences surrounding it. This includes the approaches used to make it happen, such as the Primary Health Care (PHC) approach.

UHC is one of the targets under SDG 3, specifically **target 3.8**.

In one sentence: UHC is attained when populations are able to obtain the health and health-related **services**, of enough **quality** to be effective, that they **need** to ensure their health and well-being **without causing financial hardship**.
